

Types of Errors! And Common Coding Problems!

Compilation Errors

Compilation errors are errors in the code that prevents the code from being compiled.

Runtime Errors

Errors that occur during the execution of the program code are called runtime errors. Such errors usually depend on the state of a program and are associated with incorrect values of the variables.

Commonly Made Errors

Tip: The best way to reduce errors is to make mistakes and debug¹. The better you are at debugging, the faster and more efficiently you can code!

¹ Debugging refers to the process of identifying and removing errors from hardware or software
